

HydroPump

The HydroPump is a uniquely designed push pump used to dispense cleaning chemicals into sinks, buckets, or any other cleaning receptacle. Used wherever dispensing of products is desired, the HydroPump allows the operator to control the amount of product yielded.

Fundamental to any operation

Model 616

The HydroPump can be used in any kitchen, janitor's closet, or laundry facility. By pushing the pump once, the desired chemical is effectively and efficiently directed into the appropriate container or sink compartment. HydroPump's decorative skirt gives it an attractive appearance, and the adapter plate (included) allows it to use the mounting holes from virtually any existing push pump. The HydroPump also offers the following unique features and benefits:

- ▲ Resistant to most chemicals, including chlorine, so you won't need to stock two models
- ▲ Field-adjustable to deliver 1/2, 3/4, or 1 oz. per push
- ▲ Recovers quickly to maintain accuracy if multiple doses are required
- ▲ Extremely accurate with both thick and thin products
- ▲ Product can be stored up to one foot above the pump for use in confined spaces
- ▲ Directional spout or standard tubing available as discharge options

The HydroPump is easy to use and requires almost no training. It's just one more way Hydro Systems helps provide dilution accuracy and a safe work environment.

HydroPump models

Model 616

Model	Description
616	HydroPump with directional, no-drip discharge spout
617	HydroPump with PVC discharge tubing
