

## Superior Science

**Advanced Sensitivity** The novaLUM® II ATP detection system utilizes a technologically advanced photomultiplier tube (PMT) that is more sensitive to ATP (adenosine triphosphate) presence allowing detection of lower levels of microbial and organic matter contamination. This is a distinct advantage over systems that use less sensitive PMTs or photodiodes. The novaLUM II system's PMT has low noise, a greater dynamic range, a faster response time, and accuracy over a wider temperature range.

**Cost Effective Speed** A high-speed data processor allows a quicker 5 second read time. Risks can be assessed immediately, corrective actions expedited, and production started with confidence. Reduce pre-op testing time by as much as 83% compared to other systems.

**Audit Compliant** Meet internal and 3rd party audits with novaLUM II ATP detection system's Swab Site Location, Re-test option, and a variety of other customizable features to comply with HACCP and GFSI documentation. The novaLUM II system even identifies areas that have not been re-cleaned and/or re-tested. Charm provides calibration documentation, ATP standards, comprehensive on-site trainings, and certification to meet individual requirements.

Auditors look favorably on documented random sampling and corrective action plans within ATP monitoring programs. The novaLUM II ATP detection system eliminates subjectivity by directing operators to swab randomly selected sampling points from within their pre-programmed sampling plans.

**Improved Data Analytics** The novaLUM II system has improved onboard data analysis tools including the ability to search historical results and add corrective action results and to generate graphs for rapid analysis of Pass/Fail percentages for key areas of the plant. With built-in wireless connectivity these graphs can be emailed to key managers immediately after pre-op.

## The novaLUM II ATP detection system is the preferred method for monitoring cleaning effectiveness of sanitation programs

### Take a Closer Look

Charm has developed scientifically advanced chemistry for the PockeTswab Plus and related Charm tests for sanitation, allergen control and pasteurization verification.

This chemistry, combined with the internal multiplication of the novaLUM II system's PMT detector, amplifies even the smallest light signal to detect the lowest level of contamination.

### Add Value to Your Business

Charm values our customer's business, brand and reputation. That's why Charm built the novaLUM II ATP detection system with an advanced PMT for superior sensitivity, a complete keyboard for streamlined sampling, and error-proof direct swab-entry chamber.

**Bottom Line:** Risk is reduced, product quality is improved, and shelf life is extended due to improved sanitation.

### Leading by Example

The novaLUM II ATP detection system is used successfully by diverse industries including food and beverage, pharmaceutical, industrial, personal care, cosmetic, and healthcare. Since it is fully customizable and can be preconfigured to meet unique sampling and testing environments, industry leaders choose Charm's novaLUM II system to strengthen their sanitation and hygiene monitoring programs.

## Technology Designed to Manage Your HACCP

**Benefits** Wirelessly email analytical graphs from novaLUM II system

Include corrective action notes directly to test results on the novaLUM II system

Add new swabbing locations through the novaLUM II touch screen

## Data Options

Charm's highly customizable **novaLINK 4.0** software provides complete document control and optimization of sanitation programs

**Dashboard Analytics** Improved dashboard analytics with dynamic, modifiable graphs that update critical metrics upon seamless download of test data into the software. Achieve maximum productivity with novaLINK 4.0 software's simple-to-use, point and click interface to easily access, analyze, and manage data from multiple novaLUM II ATP detection systems.

**Customized Reports** Simplified reporting function allows filtering and selection of data needed to build customizable reports. Preprogrammed interactive graphics enable simplified monitoring of corrective actions. This data can be integrated into LIMS system.

**Flexible and Configurable** The novaLUM II ATP detection system is programmable by swab site, grouped sites, facility layout, product line, process type, shift periods, cleaning programs, surface type, up to two Operator IDs, novaLUM II ATP detection system serial number, and limits with pass/fail interpretation.
